

Plastorit®

The 3-component mineral

Mica:

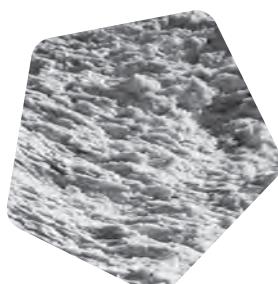

- Elastic lamellar structure
- UV-reflecting
- High temperature resistant
- Hardness: 2

Chlorite:

- Lamellar structure
- Hydrophobic
- High temperature resistant
- Hardness: 2

Quartz:

- Blocky particle shape
- Easy dispersion
- High temperature resistant
- Hardness: 7

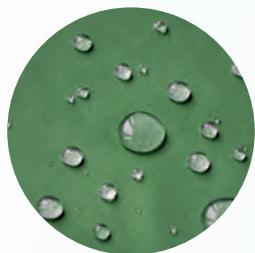

Plastorit®

The 3-component mineral

The key difference:
A natural coalescence
of lamellar minerals

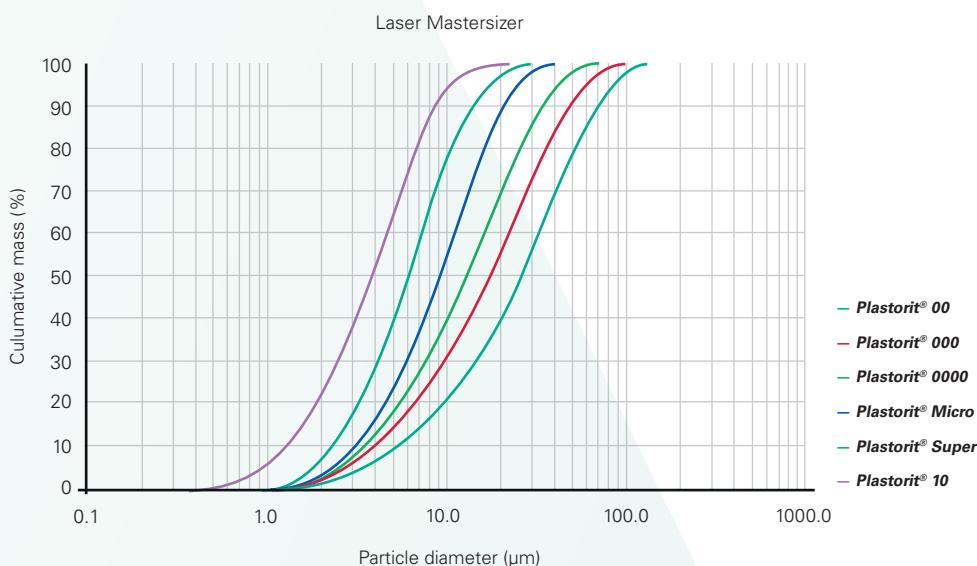

Chemical and physical data

| | | | | |
|-------------------------|--------------------------------|-----------------------|----------------------|------------------------------|
| SiO_2 58.0% | Al_2O_3 20% | MgO 12.0% | FeO 3.0% | K_2O 2.0% |
| Loss on ignition | (%) (1050°C, 1h) | | | 4.5 |
| Moisture | (%) (DIN ISO 787/2) | | | max 0.5 |
| Density | (kg/cm³) (DIN ISO 787/10) | | | 2.78 |
| pH value | (%) (DIN ISO 787/9) | | | 9.5 |
| Acid solubility | (%) (HCl 1%, 20°, 20 min) | | | 1.5 |

Particle size distribution

Sieve analysis residue in % on (DIN 66 165)

Now compliant with EC eco-labelling criteria

Plastorit®

The 3-component mineral

Enhances

Prevents

Thanks to its...

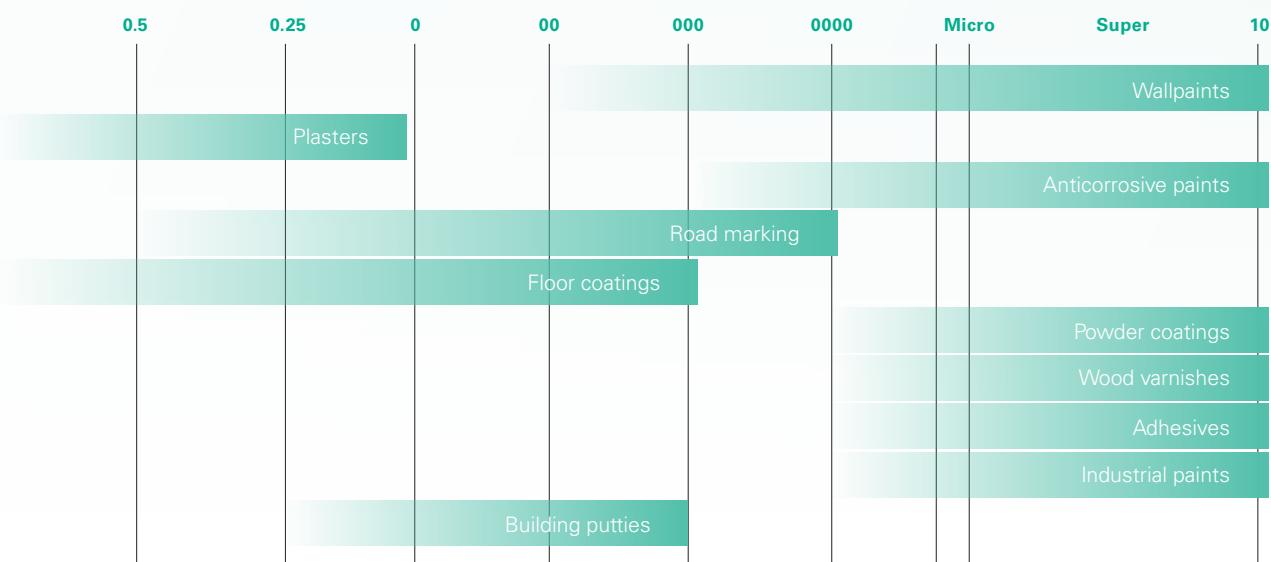

- Weather resistance
- Surface hardness
- Abrasion resistance
- Wash and scrub resistance
- Elasticity
- Adhesion
- Application

- Film cracking
- Hard sedimentation
- Chalking of deep colour paints

- Inert behaviour
- Lamellar structure
- Dispersibility
- Low structure viscosity
- Low resin demand

Plastorit® grades
